**DETAILED ACTION*****Claim Objections***

1. Claim 16 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. In an article claim limitations given to the workpiece does not further limit the parent claim.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-6, 15 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hammond in view of Moldovan et al.

Hammond discloses all the limitations of claims 1, 4 and 15, i.e., an apparatus and a method for texturing a magnetic hard disk, with a rotational spindle (32) rotating the workpiece in a predetermined plane, a contact member (44) supported for movement in a radial direction (64, 62), a drive (138) connected to the spindle for rotation of spindle, except for disclosing varying the speed of

**Response to Arguments**

5. Applicant's arguments filed 06/09/03 have been fully considered but they are not persuasive. The argument that the teaching reference (Moldovan et al.) discloses an apparatus different than the base reference (Hammond) is not persuasive, since both teach a lapping or an abrading apparatus designed to lap, abrade or polish a workpiece. In response to applicant's argument that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, Moldovan et al. discloses an improvement for a lapping apparatus of the type having a disc shaped lapping surface wherein control is effected so that the relative speed between the part being lapped and the lapping surface is held constant (Abstract, Summary of the Invention) so that uniformity of cutting efficiency is assured across the entire usable lapping surface of the lap (col. 4, lines 16-19).
